Complementary views of protein conformational state space

COMPLEMENTARY INFORMATION

Representative structure prediction

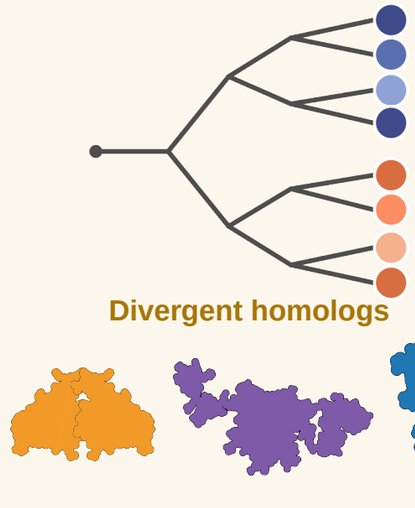

One representative structure

Confidence does not imply occupancy

Examples:
AlphaFold 2/3
RoseTTAFold · ESMFold

Candidate−state generation

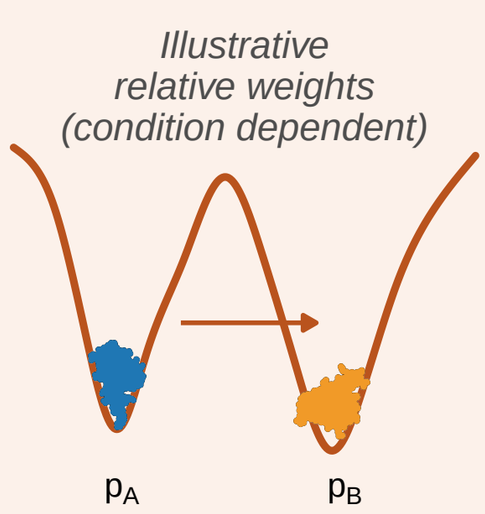

Candidate states

Sampling does not establish accessibility

Examples:
MSA perturbation
AF−Cluster · Cfold

Energetic and kinetic estimation

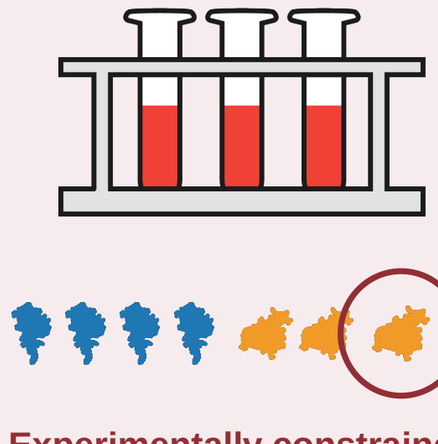

Model−dependent weights and rates

Model, force−field, and sampling dependent

Examples:
MD and enhanced sampling
AF2−RAVE · BioEmu

Experimental constraints and tests

Experimentally constrained interpretation

Averaged and potentially non−unique

Examples:
NMR · smFRET/DEER
HDX−MS

Joint interpretation is required for landscape inference
